

Verizon Projects (2016-2017)

AR/VR TradeShow App

Verizon demonstrated a future app to help Network Engineers on the field identify key equipment on a map in real time using Augmented Reality.

Engineering Efficiency using
AUGMENTED REALITY

Camera + Geo Assets + GPS = AR

- Place new network elements
- 3D visualization for optimization
- Locate serving network elements

verizon

Google Street View + **GEO Assets = VR**

- Superimpose customers and network elements (fiber, smart city devices, hub, terminal, poles, manholes)
- Remote engineering design
- Remote inventory audit and correction

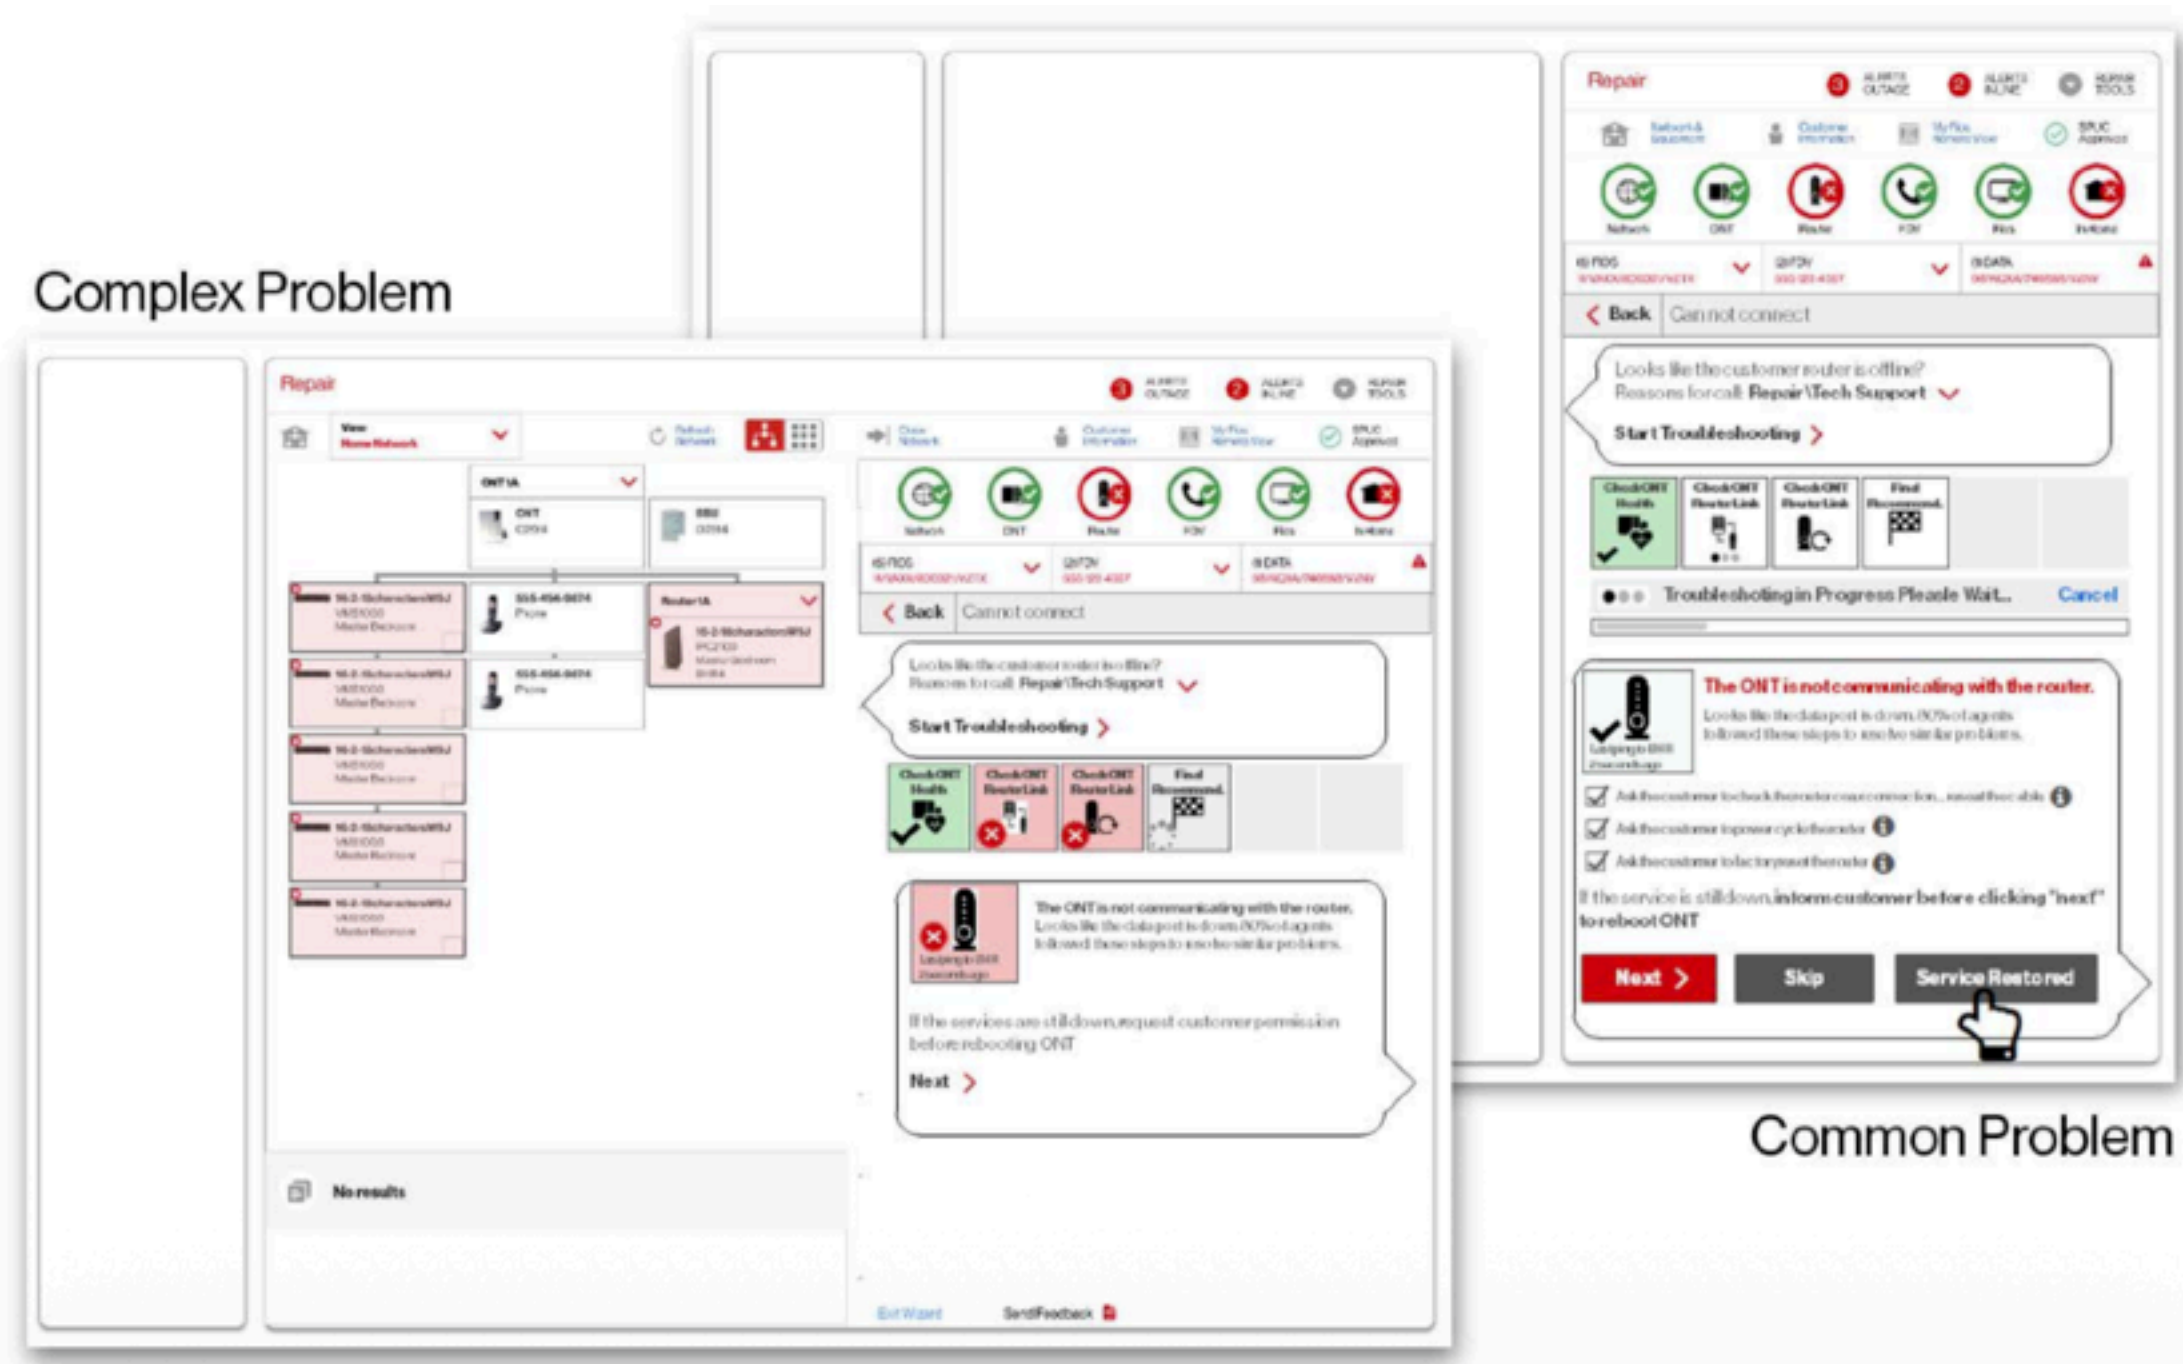

Remote Engineering using
VIRTUAL REALITY

Verizon Projects (2016-2017)

Complex Problem

Common Problem

OPTIX Application

Verizon Optix application was initially designed by the engineering team to resolve customer service network issues.
